PCL COVID19 Ag Gold Saliva

Antigen Rapid Test

Winner of comparison study from German Red Cross

The Antigen Rapid Test from PCL opens a new dimension in the containment of the Corona pandemic.

Different to most rapid tests, the qualitative evidence of a potential Corona infection occurs comfortable, painless und precise via a little bit saliva delivery .

According to numerous publications in medical trade journals, spite tests are safer than i.e. nasopharynx swabs as their resultats depend to a large extent on swabs that have been correctly taken. Regardless of this, such tests are not only unpleasant for probands, but also partially connected with pain, nosebleeds and even vomitting.

PCL COVID19 Ag Gold Saliva is very easy to handle and can be performed on site by trained personnel („Point of Care“ – POC).

In some countries of the EU, the test may be sold freely in pharmacies and is predestinated for home testing as soon as the politcal bodies will allow this in the very next future.

The actual study of the German Red Cross due to which PCL COVID19 Ag Gold Saliva performs best, assigns excellent values:

- Test shows a high clinical sensivity von 94 % and a clinical specificity von 100 %.
- CT value of 22 outperforms other products.
- Result is available in only 10 minutes.
- PCL COVID19 Ag Gold Saliva is CE certified and reimbursable as a rapid test listed with the German Federal Institute for Drugs and Medicals (BfArM) according to respectively state regulations.

Therefore, the test is ideally suited as quickest possible proof for the risk potential in sensitive areas of clinics, care facilities, test centres, companies and practices.

Especially institutions with high public traffic, inter alia airports, train stations etc. will benefit from the precision and the quick test result.

The variant of the Corona Virus detected in UK and other countries does not affect the test result. PCL is based on the nucleoprotein, the new virus has only mutated on the socalled spike protein.

A testkit consits of:

- 1 test card
- 1 extraction buffer tube
- 1 filter cap

A packaging unit contains 50 tests. Single packed test are also available.

Box with 50 testkits

Single package

Test card

The test is exclusively distributed in cooperation with the manufacturer PCL Inc. and GFE, the German Society for Research, Development and Distribution of Diagnostics in Blood Donation. GFE is a 100 % subsidiary of the German Red Cross and has been considered a leader in PCR analytics for 15 years.

LVL technologies GmbH & Co. KG, a German company founded in 1989, acts as partner for the international trade. LVL is one of the world market leaders in the field of pipetting systems, automatic sample archiving and liquid handling.

You therefore receive a product of highest quality and values that have hardly been achieved in rapid tests. The convenient handling of PCL COVID19 Ag Gold Saliva will significantly increase the readiness for regular testing and supports in particular the operational measures for pandemic preparedness.

PCL COVID19 Ag Gold Saliva is a medical product developed in elaborate scientific procedures and may only be sold to authorized persons unless otherwise prescribed.

The approval as a home test is actually under discussion because compared to other spit tests, the sample taken does not have to be pipetted nor are special protective measures such as wearing of overalls required.

The study of German Red Cross, certificates, manual and samples will be sent to you upon your esteemed request.

Kind regards
